December 20, 2007

Morton Energy has completed installation of a Solar Power Backup System at the Ohio Township Public Library in Newburgh, Indiana. The system will reduce the library's monthly energy consumption and provide power to critical loads during utility power outages. The system consists of (27) Sharp 208Watt solar panels for a total of 5.6 kW of generating capacity and is capable of powering critical loads at the library in emergency power outages. The system performance can be monitored via this website: [www.sunnyportal.com](http://www.sunnyportal.com). Similar systems can be used to power applications such as telecommunications, medical, or any load which must maintain power in emergency situations. The Ohio Township Public library is a LEED Registered library with the State of Indiana and is located off of Bell Road in Newburgh, Indiana. Tours are available by contacting Director Steve Thomas at (812)853-5468. Morton Energy is a provider of wind and solar energy products and services and is based in Evansville, Indiana.
